

*The benefits of*

# The Chimney Balloon

## **The benefits of the Chimney Balloon**

**It stops chimney draughts,** reduces heat loss and saves you money!

**It saves energy** by preventing heat from going straight up the chimney and cold draughts coming down your chimney.

### **Other benefits:**

- **Reduces Heat Loss**
- **Reduces Noise**
- **Saves you Money**
- **Keeps Back Soot**
- **Keeps Back Birds Mess.**

**The chimney balloon** is completely safe and is designed to be used again and again.

It will stay in place for years - and stay inflated. It will provide 'double glazing' for your fireplace. You can deflate it (and re-inflate it) any time you want a fire.

**When warm air is being sucked away,** it also pulls in cold air. Which is why you can feel it rushing in through the gaps in floors, doors and windows. Block your fireplace though and not only does the heat not leave your home, the cold air isn't drawn in.

**Just insert the Chimney Balloon** into your chimney opening, inflate and it'll fill the gap but allow just a little ventilation. If you want you can safely leave it there for years until you next want to have a fire. Then you just deflate it and store it - ready to be used for when you next need it.

**Even if you forget it - and light a fire,** it will just melt, harmlessly. Best of all, it's cheap, starting from £25.00 and it's readily available at the click of a button.
