AREAS

Area measurement is to plan only.

The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267 parcel number
1-879ha area in hectares
4-47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.

Limit of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2.471 05

To convert acres to hectares multiply by 0.404 68

NATIONAL GRID REFERENCE

The grid lines form part of the national grid and are 100 metres in length. To give a reference defining the position of a point to within 10 metres proceed as follows—

EXAMPLE: R in Railway House

EASTING

Take west edge of 100 metre square in which point lies and read the figures opposite this line on the 'top' or 'west' margin.

Estimate tens of metres on the 'top' margin.

For further information see the 'METS' reference.

NORTHING

Take south edge of 100 metre square in which point lies and read the figures opposite this line on the 'left' or 'south' margin.

Estimate tens of metres on the 'left' margin.

For further information see the 'METS' reference.
