AREAS

Area measurement is to plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267 parcel number
1.809ha area in hectares
4.47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurement of area. Limit of area within which individual parcels are not shown. To convert hectares to acres multiply by 2.471 05. To convert acres to hectares multiply by 0.404 69.

NATIONAL GRID REFERENCE

The grid lines form part of the national grid and are at 100 metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows—

EXAMPLE: 8 in Bush Marsh

EASTING		NORTHING	
Take west edge of 100 metres square in which point lies and read the figure opposite this line on the north or south margin	Estimate area of metres from grid line to the point	Take south edge of 100 metres square in which point lies and read the figure opposite this line on the east or west margin	Estimate area of metres from grid line to the point
