AREAS
Area measurement is to plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267 parcel number
1.80ha area in hectares
4.47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or features joined for measurement of area.
Limit of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2.471 05.
To convert acres to hectares multiply by 0.404 69.

NATIONAL GRID REFERENCE
The grid lines form part of the national grid and are at 100 metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows:

EXAMPLE: D in Deepdene Farm
EASTING: Take west edge of 100 metre square in which point lies and read the figure opposite this line on the north or south margin.
NORTHING: Take south edge of 100 metre square in which point lies and read the figure opposite this line on the north or south margin.
Estimate area of metres from grid line to the point.
