AREAS

Area measurement is to plan edge only. The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267.....parcel number
1.809ha.....area in hectares
4.45.....area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurement of area are shown as one area. Limits of area within which individual parcels are not shown.

To convert hectares to acres multiply by 2.471 05
To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE

The grid lines form parts of the national grid and are at 100 metre intervals. To give a reference defining the position of a point to within 10 metres proceed as follows—

EXAMPLE: 213 297
R in Risegate House

EASTING
Take west edge of 100 metre square in which point lies and read the figure opposite this line on the north or south margin.
Estimate tenths of metres from grid line to the point.

NORTHING
Take south edge of 100 metre square in which point lies and read the figure opposite this line on the east or west margin.
Estimate tenths of metres from grid line to the point.
