AREAS

Area measurement is to plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.
EXAMPLE: 1:800ha 4.47 acres

When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or features joined for measurement of area.
Light of area within which individual parcels are not shown.
To convert hectares to acres multiply by 2.471 05.
To convert acres to hectares multiply by 0.404 69.

NATIONAL GRID REFERENCE

The grid lines form part of the national grid and are at 100 metre intervals. To give a reference defining the position of a point on the plan within 10 metres proceed as follows—

EXAMPLE: 10 24 184

EASTING: 10 24 184
NORTHING: 10 24 184

Take west edge of 100 metre square in which point lies and read the figures opposite this line on the east or west margin.
Estimate tens of metres from grid line to the point.
