Where the boundary of an Admin Co., County Borough or Co. of City is coincident with that of a geographical county, the symbol for the latter is shown. County type boundary is usually coincident with civil parish boundary and the symbols for both are shown, e.g. but where any other boundary coincides with that of a civil parish the symbol for the latter only is shown, e.g.

Imperial equivalents for metric boundary measurements
0.91m = 3ft. 1.2m = 4ft.

AREAS

Area measurement is to plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4257..... parcel number
1.807ha..... area in hectares
4.47..... area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls. Enclosures or features joined for measurement of area are shown by a dashed line. Limit of area within which individual parcels are not shown. To convert hectares to acres multiply by 2.47105. To convert acres to hectares multiply by 0.40469.

NATIONAL GRID REFERENCE

The grid lines form part of the national grid and are at 100 metre intervals. To give a reference defining the position of a point in the plan, proceed as follows—

EXAMPLE: 215 275

Take west edge of 100-metre square in which point lies and read the figures opposite this line on the east or west margin. Estimate tens of metres from grid line to the point.

Take north edge of 100-metre square in which point lies and read the figures opposite this line on the north or south margin. Estimate tens of metres from grid line to the point.
