AREAS

Area measurement is to plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267.....parcel number
1.607ha.....area in hectares
4.47.....area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or features joined for measurement of area.....058
Estimate tens of metres from the grid line to the point (distance in).....088
The resulting four figure number is the Easting.....0888

Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin.....291
Estimate tens of metres from the grid line to the point (distance in).....6
The resulting four figure number is the Northing.....2916

4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing.....TQ 08882916
For further information see 'An Introduction to the Projection for Ordnance Survey Maps and the National Reference System.'

EXAMPLE from sheet TQ 0829

1. Take the two letters preceding the sheet number.....TQ 0829
2. Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin.....058
3. Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin.....291
4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing.....TQ 0829058291
