AREAS

Area measurement is to plan edge only.

The number and area, in hectares (ha) and acres, is shown within each parcel of land.

EXAMPLE: 4267 parcel number

1-807ha area in hectares

1-4-47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.

Enclosures or features joined for measurement of area

Limit of area within which individual acreage is not shown

To convert hectares to acres multiply by 2.471 05

To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:

EXAMPLE from sheet TQ 0529

1. Take the two letters preceding the sheet number.....TQ 058

2. Take the west edge of the grid square in which the point lies and read the figures opposite this line on the north or south margin.....058

Estimate tens of metres from the grid line to the point (distance in metres).....8

The resulting four figure number is the Easting.....0588

3. Take the south edge of the grid square in which the point lies and read the figures opposite this line on the east or west margin.....291

Estimate tens of metres from the grid line to the point (distance in metres).....6

The resulting four figure number is the Northing.....2916

4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing.....TQ 05882916
