Imperial equivalents for metric boundary markings
0.91m = 3ft
1.22m = 4ft

AREAS

Area measurement is to plan only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.
EXAMPLE: 4.267 parcel number
1.809ha area in hectares
4.47 area in acres
When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or features joined for measurement of area
Limit of area within which individual parcels are not shown
To convert hectares to acres multiply by 2.471 05
To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:-
EXAMPLE from sheet TQ 0529
1. Take the two letters preceding the sheet number TQ
2. Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin 058
3. Take the east edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin 291
4. The full ten metre reference is given by writing first the letters, followed by the Easting and then by the Northing TQ 0582916
