AREAS
Area measurement is to plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.
EXAMPLE: 4267 parcel number
1807ha area in hectares
4417 area in acres
When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or features joined for measurement of area
Limit of area within which individual parcels are not shown
To convert hectares to acres multiply by 2.471 05
To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE
The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:-
EXAMPLE from sheet TQ 0529
1. Take the two letters preceding the sheet number.....TQ
2. Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin.....058
3. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin.....291
4. The full six-figure reference is given by writing first the letters, followed by the Easting and then by the Northing.....TQ 058291
The resulting four figure number is the Northing.....2916
For further information see 'An Introduction to the Projection for Ordnance Survey Maps and the National Reference System.'

VEGETATION CLASSIFICATION
Where space permits, tree and scrub symbols in woods are shown in groups of four, three, two or singly to indicate close, medium, open or scattered density of trees or scrub.

Imperial equivalents for metric boundary measurements
