AREAS

Area measurement is to plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.
Enclosures or features joined for measurement of area.
Limit of area within which individual parcels are not shown.
EXAMPLE: 4267 parcel number
1.007ha area in hectares
4.47 area in acres

When identifying a parcel it is important to specify the number of the plan on which it falls.
Enclosures or features joined for measurement of area.
Limit of area within which individual parcels are not shown.
To convert hectares to acres multiply by 2.471 05
To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point to within 10 metres proceed as follows:
1. Take the two letters preceding the sheet number.
2. Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin.
3. Take the east edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin.
4. Take the south edge of the grid square in which the point lies and read the figure opposite this line on the south or north margin.
The resulting four figure number is the National Grid Reference.
The full six figure reference is given by writing first the letters, followed by the Easting and then by the Northing.
For further information see 'An Introduction to the Projection for Ordnance Survey Maps and the National Reference System'.
