AREAS

Area measurement is to plan edge only.
The number and area, in hectares (ha) and acres, is shown within each parcel of land.
EXAMPLE: 1.809ha area in hectares
4.47 acres area in acres
To convert hectares to acres multiply by 2.471 05
To convert acres to hectares multiply by 0.404 69

NATIONAL GRID REFERENCE

The grid lines form part of the National Grid and are at 100 metre intervals. To give a unique reference defining the position of a point in the grid system proceed as follows—
EXAMPLE from sheet TQ 059

- Take the two letters preceding the sheet number—TQ
- Take the west edge of the grid square in which the point lies and read the figure opposite this line on the north or south margin—058
- Estimate tens of metres from the grid line to the point (distance x) — 8
- The resulting four figure number is the Easting—0588
- Take the south edge of the grid square in which the point lies and read the figure opposite this line on the east or west margin—291
- Estimate tens of metres from the grid line to the point (distance y) — 6
- The resulting four figure number is the Northing—2916
- The full six figure reference is given by writing first the letters, followed by the Easting and then by the Northing—TQ 05882916
